

What's new with Codex

A product update on Codex as an AI workspace,
work automator, and enterprise execution layer

OpenAI Codex

April 2026 feature pitch

Codex turns coding into an AI workspace for real work

-  Plan, code, test, and ship in one loop
-  Run multiple tasks in parallel
-  Turn outputs into artifacts teams can review

AI workspace

Less setup, richer outputs, more momentum across long-running work.

GPT-5.5 makes Codex stronger on complex, long-running work

Proof points

82.7%

Terminal-Bench 2.0

58.6%

SWE-Bench Pro

What improves

More reliable on debugging, tests, and multi-step refactors during longer agent sessions.

Artificial Analysis Intelligence Index

Codex turns repeat work into reusable workflows

What's new

- Atlas Control (macOS) Use the bundled CLI to control Atlas and inspect local browser data. Personal
- Exec Plan Create, maintain, and execute long-form execution plans ("ExecPlans") for complex, m... Personal
- GitHub FX CI Debug failing GitHub Actions CI Personal
- Linear Manage Linear issues in Codex Personal
- OpenAI Docs Reference the official OpenAI Developer docs Personal
- Yeet Stage, commit, and open PR Personal
- Skill Creator Create or update a skill System
- Skill Installer Install curated skills from openai/skills or other repos System

Codex
Memories

Create automation

Automations run on worktrees. If an automation is unsuccessful (e.g. if "find and fix bugs" does not find any bugs) it will auto-archive. [Learn more.](#)

Name

Improve test coverage

Projects

If you want an automation to run on a specific branch, you can specify it in your prompt.

recipe-app × photobooth ×

Prompt

Identify untested paths from recent changes; add focused tests and use [Yeet](#) for draft PRs.

Constraints:

- Keep scope tight to the changed areas; avoid broad refactors.
- Prefer small, reliable tests that fail before and pass after.

Memories keep context

Automations make repeat work systematic

Browser and computer use let Codex automate real work, not just write code

Inspect live UI

Control real apps

Package outputs

Codex is scaling from developer tool to enterprise execution layer

3M+ → 4M+

weekly developers in two weeks

Enterprise proof

Virgin Atlantic, Ramp, Notion, Cisco, Rakuten

Test coverage · Code review · New features · Incident response

Scale path

Codex Labs + 7 GSI partners

Accenture, Capgemini, CGI, Cognizant, Infosys, PwC, TCS

Enterprise adoption flywheel

Labs → Pilots → Production → Rollout

Codex becomes the execution layer across the enterprise
